

Guide of the production

- Follow symbols and marks in each of the parts and in the photo images (photo description).
- Each tab for sticking has a guide number. In complicated processes, those numbers will be helpful. (However, this type of craft making has a complex structure. Sometimes flexible thinking is needed.)
- It is important not to lose the right positions of dotted lines to make the correct shape. (If you miss the positions, you can gently separate the parts. If the glue had dried and you are unable to take it apart, you should cut it and re-glue with new backing tabs.)
- Those parts that need to be sharpened should be bent along the dotted lines.
- Cut out only the necessary parts for the current section you are working on from each page. (It is better not to cut out parts for other processes.)
- Assemble and glue small parts then adjust the shape as you attach them.
- Where necessary, lightly score folding line between the white tabs with the craft knife. For curves, it may also be necessary to make notches in the white tabs and bend them slightly to adjust shape. If you cut off the white tabs by mistake, you can stick additional paper tabs on to replace them. Don't worry!

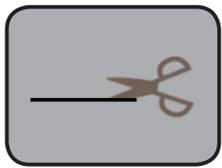

Materials and Tools

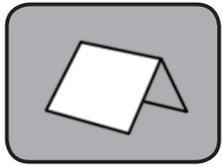

- A craft knife, scissors, adhesive, and a tiny stick (a cocktail stick, a wire, a pin etc.)
- A fluid adhesive is recommended. When you need to glue small parts, a tiny stick will help your molding.
- Take care not to get the model wet. Paper can be effected by water and humidity. If joint parts are visible after gluing, rub with a toning color pencil (3B or softer).
